Woodcarver
Deborah Mills of
Deborah Mills

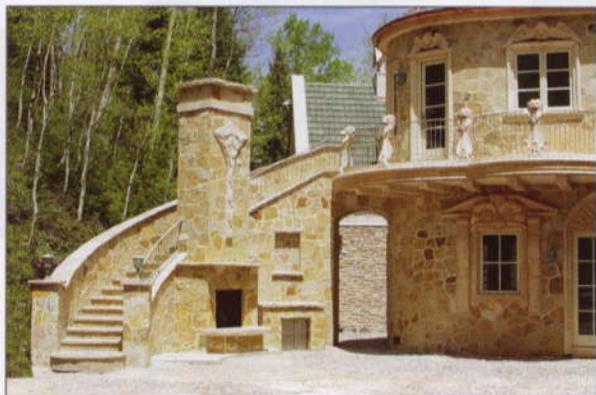

Woodcarving and Art Furniture works with traditional techniques and themes to create one-of-a-kind designs in wood for applications that include doorways and doors, window frames, mantel pieces, friezes, panels, furniture, decorative items, and more. She also regularly

works with sub-contractors to hand carve elements built by others.

Carver's Art

Much of Mills' work is heavily influenced by her study of Scandinavian folk art and the Viking carving traditions, and it exhibits the same intricacies and simplicities of detail. However, her range also includes Art Deco, Baroque, Early American, Egyptian, and just about any other style. She can coax delicate fretwork and intertwining shapes out of wood, as well as simple, straightforward bas-reliefs and freestanding forms.

Mills' repertoire includes original works and reproductions of historical or period pieces. If a client likes a specific piece of her work but needs it in a different size, Mills can reproduce the design in the required dimensions. She also offers simple finishes that enrich the wood, as well as decorative finishes such as 22-karat gilding, paint, and stain. Mills works with all kinds of wood, including oak, walnut, poplar, and cherry. 212.447.5146. www.furniturenewyork.org/members.html. Circle 170.

Cast of Stone

"We put all the information—the good, the bad, and the ugly—on the Web. That way communication is open," says CEO Melody Brenna.

Milestone works in a broad range of architectural styles, and its process combines high-tech design, engineering, and mold-making with hand-carved detailing. 888.851.3381. www.milestoneltd.com. Circle 171.—Stephani L. Miller

Utilizing proprietary, concrete-based lightweight cast stone, Milestone Ltd. can create custom architectural ornaments and match antique elements that achieve the appearance and texture of natural stone. The company specializes in architectural elements such as balustrades, window and door surrounds, capitals, columns, medallions, fireplace surrounds, friezes, exterior facing, tiles, and sculpture.

From design concept through 3-D drafting to engineering and final installation, the company's designers maintain the lines of communication with the architect, builder, and owner through the use of private project Web sites. The company posts all information pertaining to its work on the project's Web site, including sketches, engineering drawings, change orders, signatures, and notifications.

Callback The following product information contained an incorrect phone number in the May/June 2005 issue. ■ **Tremco Barrier Solutions.** The Horizon Foundation Finishing System provides moisture and thermal protection to exposed foundation walls between the grade line and the sill plate and comes in insulated and uninsulated versions. It is a three-layer system incorporating a Tuff-N-Dri basement waterproofing membrane, a high-density insulation panel, and a waterproofing and insulating topcoat. 800.379.2768. www.guaranteeddrybasements.com.
